9. User Authentication & Sign-in Gateway	Completed

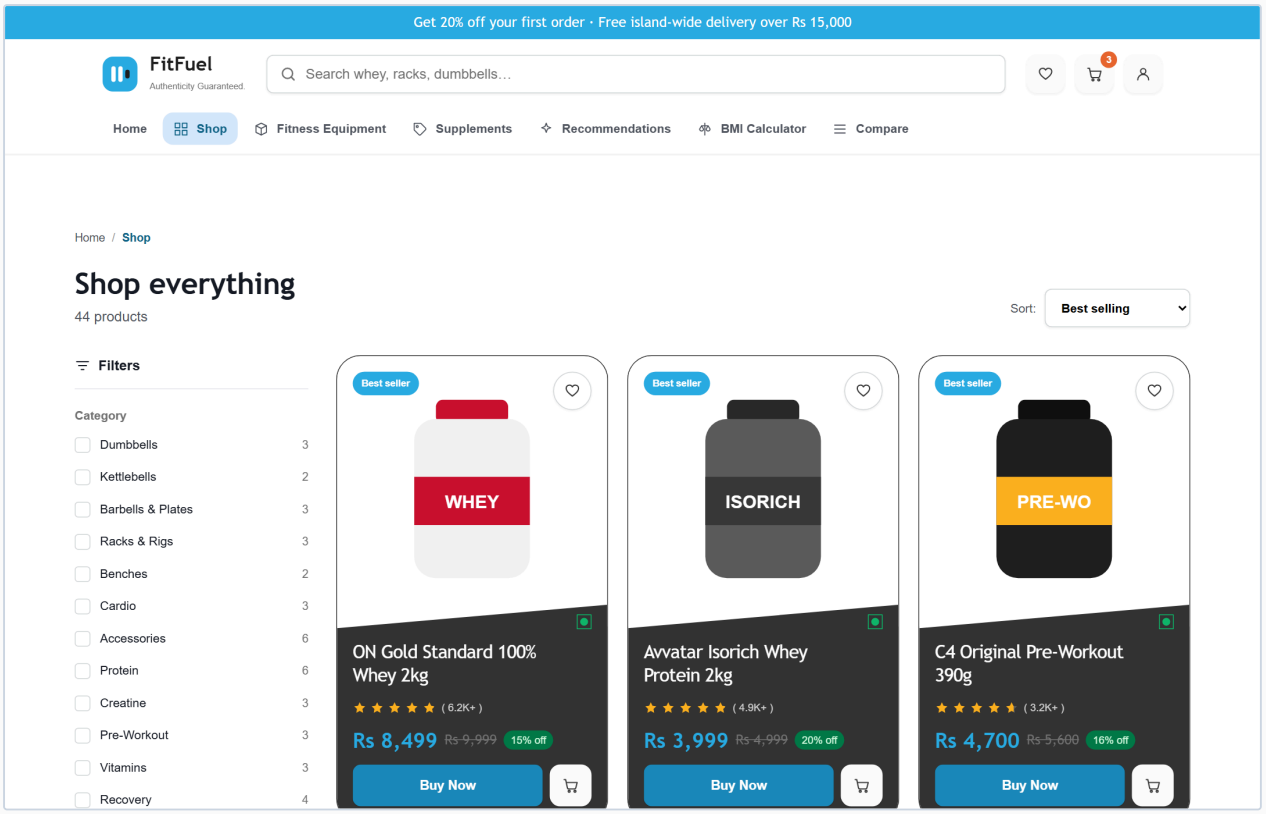

Frontend Development (Storefront Implementation)

1. Storefront Home Page & Promotional Banner

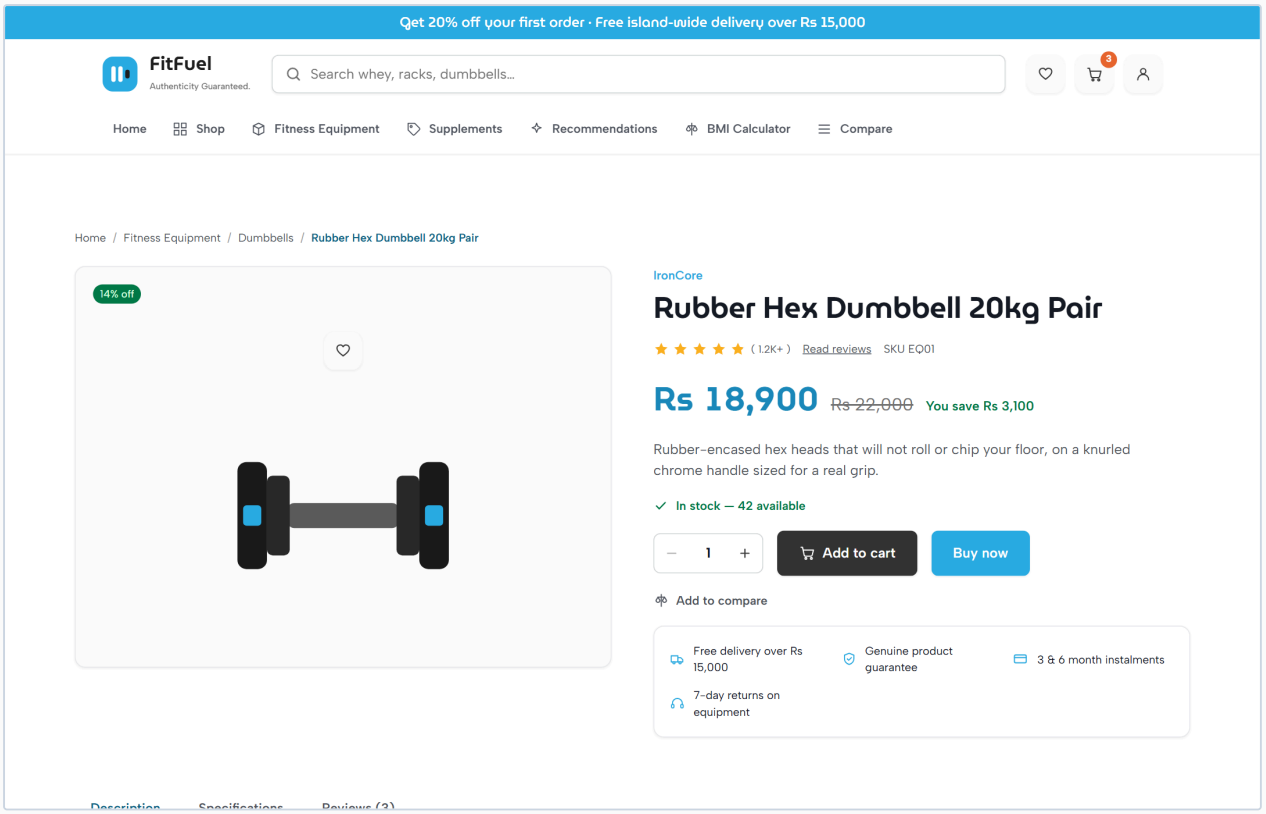

This is the implemented React home page developed for the FitFuel storefront. It features dynamic promotional hero carousels, category cards, a global search bar, and shopping cart counter. Customers can quickly explore trending supplements, special deals, and fitness equipment from this landing screen.

2. Product Listing & Filter Catalog

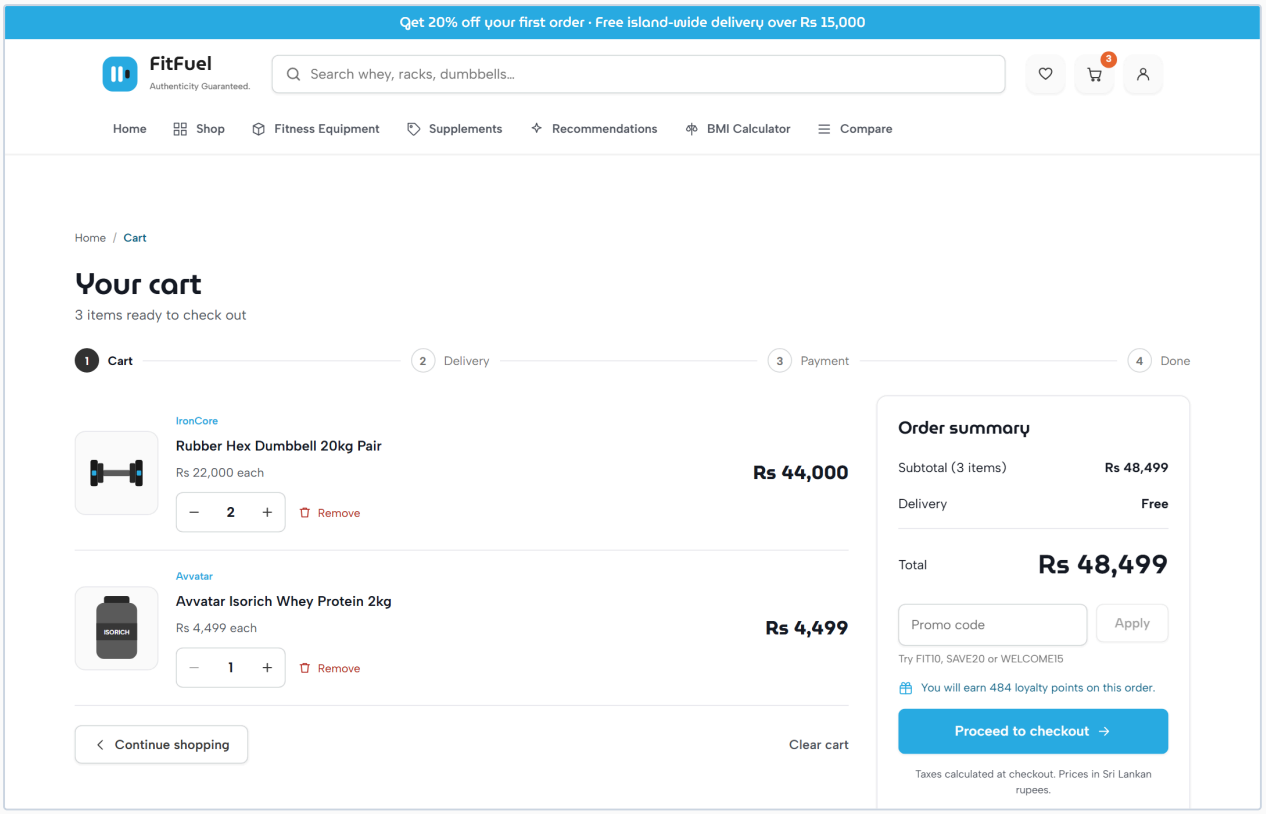

This is the full product catalog page built with interactive filtering and sorting mechanisms. Users can filter products by category (Dumbbells, Cardio, Protein, Pre-workout), set custom price ranges, and sort items by price or popularity. Each product card displays live stock status, discount prices, and quick action buttons.

3. Product Details & Technical Specifications

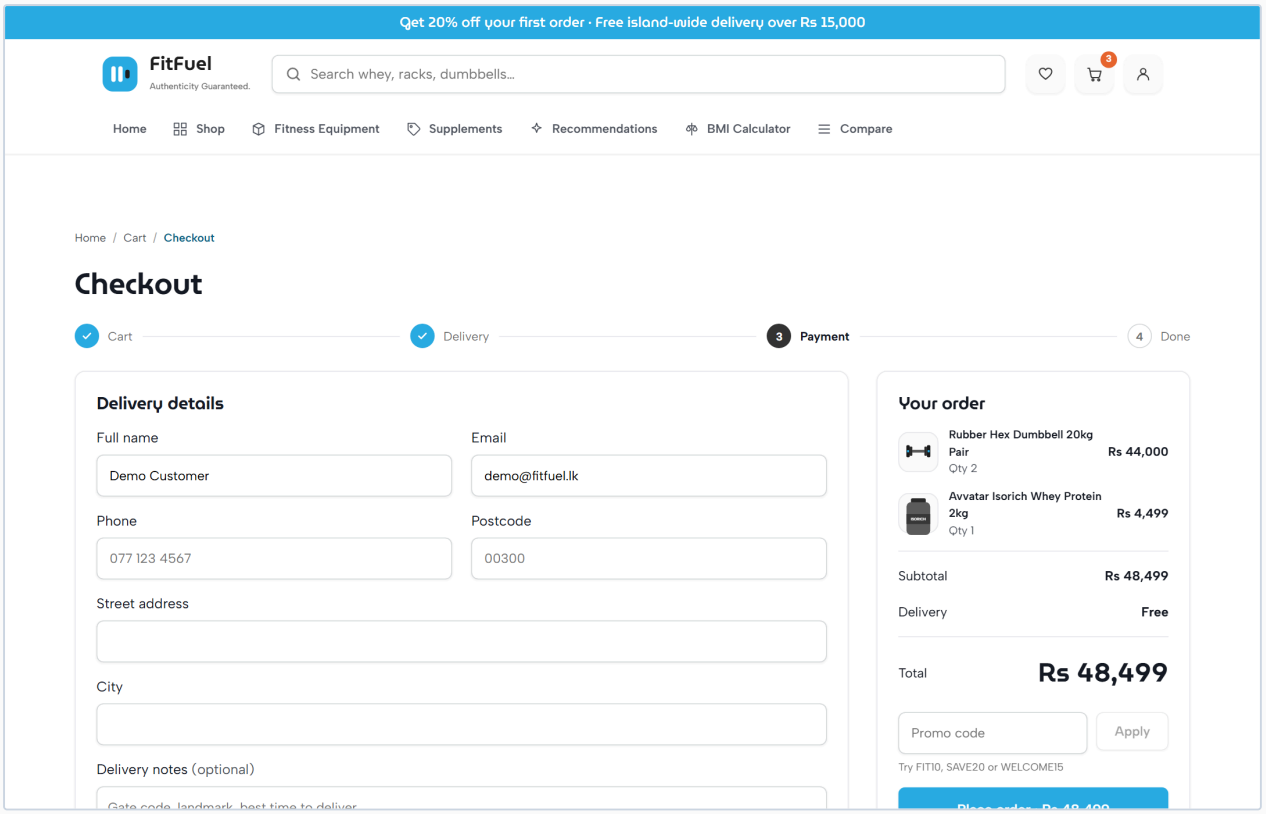

This page displays detailed product information for selected fitness equipment or supplements. It features clear product artwork, technical specifications (weight, material, warranty), pricing savings, and customer review summaries. Users can select desired quantities and instantly add items to the cart or wishlist.

4. Interactive Shopping Cart & Price Summary

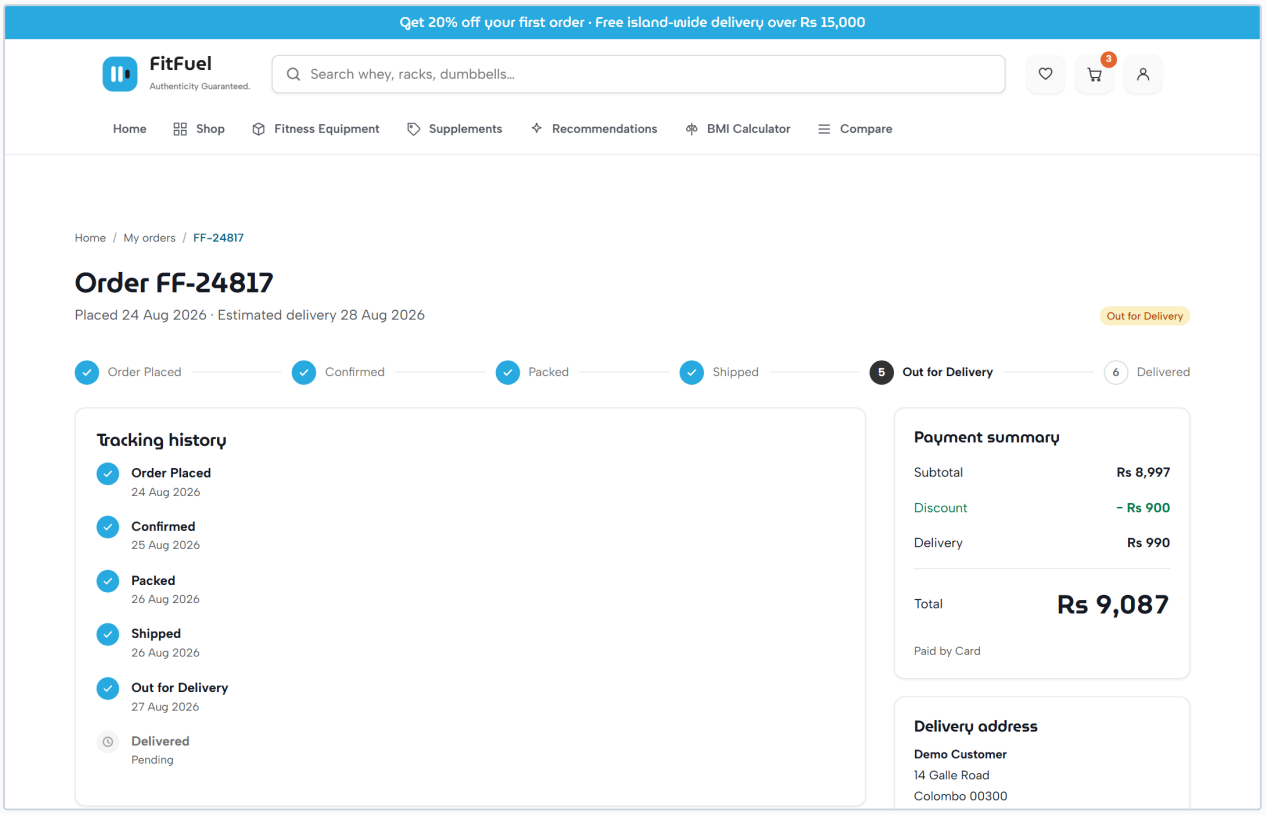

This is the fully functional shopping cart interface where users can review selected items. It supports dynamic quantity increment/decrement, item removal, and coupon code application with instant total recalculation. It also includes an island-wide free delivery progress bar to encourage higher order values.

5. Multi-Step Validated Checkout & Payment Selection

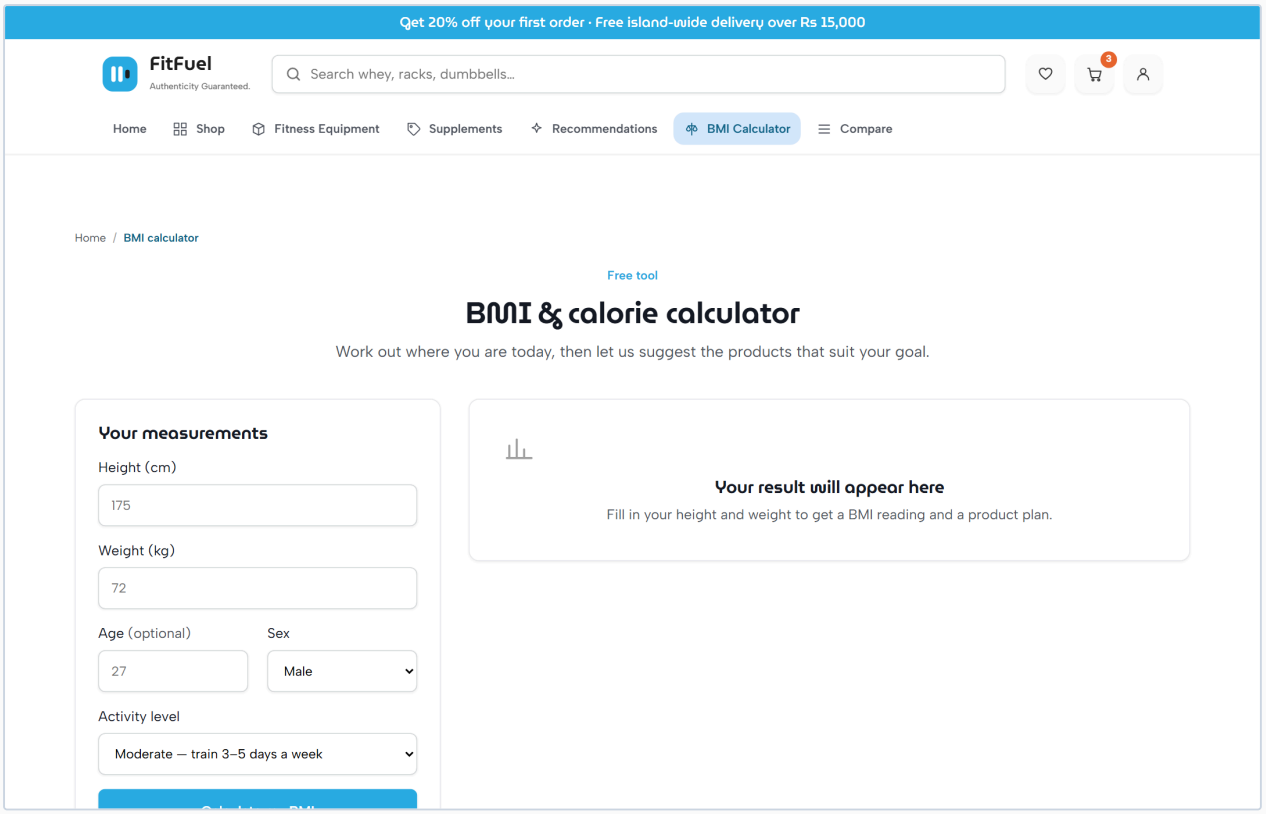

This is the multi-step checkout screen designed with thorough form validation for shipping and billing details. Users can enter their delivery address, choose shipping methods, and select payment options including Credit/Debit Card or Cash on Delivery. It displays a real-time order summary before final placement.

6. Order Confirmation & Live 6-Stage Tracking

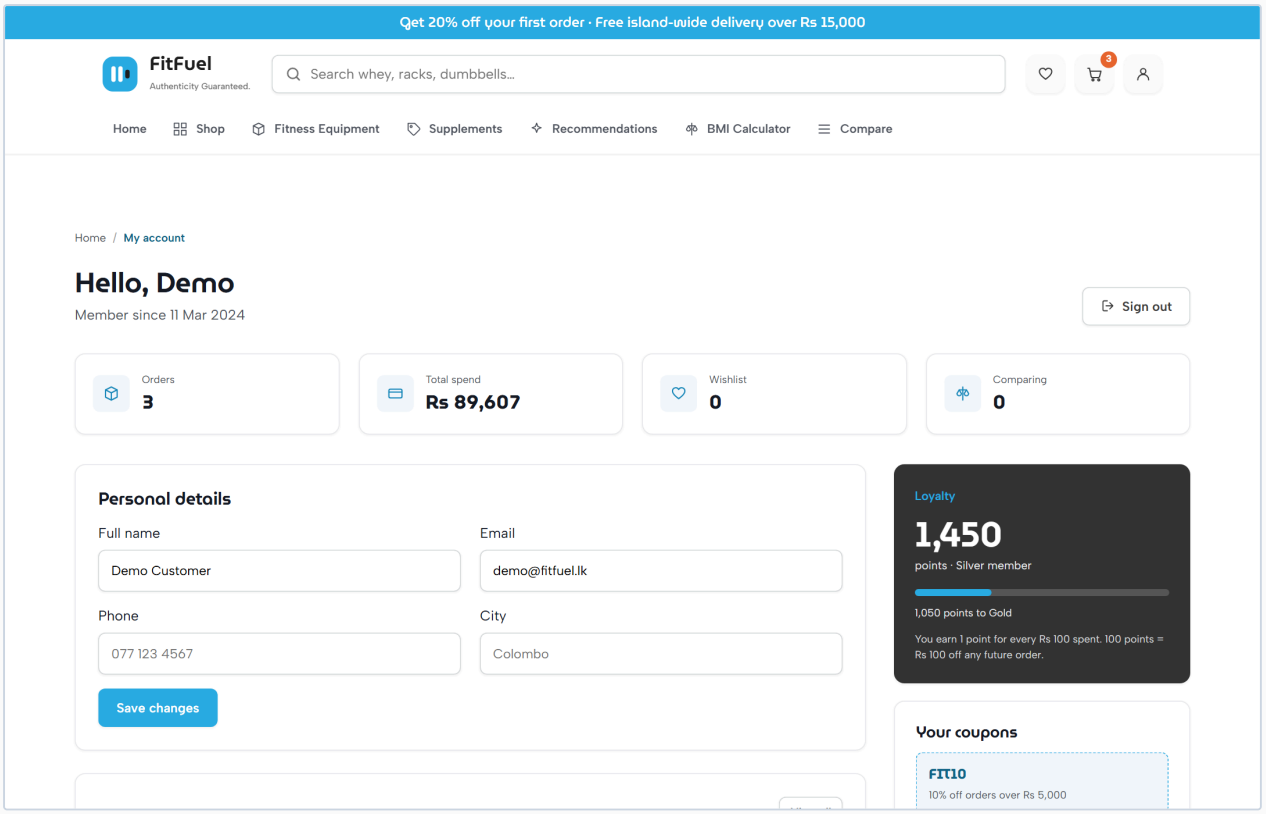

This screen provides real-time order tracking with a visual 6-stage delivery timeline from 'Order Placed' to 'Delivered'. Customers can view their unique order tracking ID, estimated delivery date, shipping address, and payment breakdown. It ensures full transparency and post-purchase customer satisfaction.

7. Interactive BMI & Calorie Health Tool

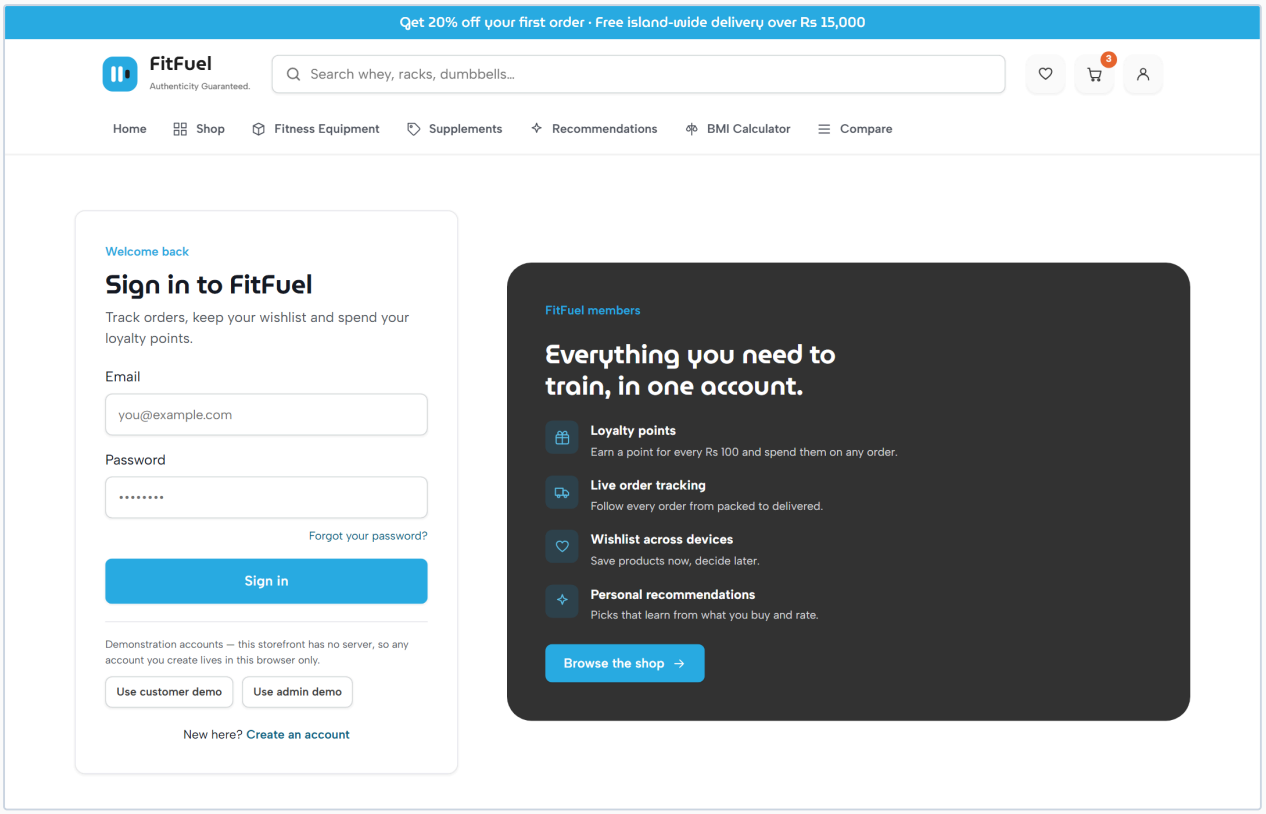

This is a built-in interactive health tool that calculates Body Mass Index (BMI) and daily caloric needs based on user height, weight, age, and activity level. It provides clear fitness goal recommendations (weight loss, maintenance, muscle gain) and suggests suitable supplements tailored to the user.

8. Customer Profile & Loyalty Reward Points

This is the personalized customer profile dashboard displaying earned loyalty reward points and membership tiers (Bronze, Silver, Gold). Customers can view their complete past order history, check current point balances, manage saved delivery addresses, and update their account credentials.

9. User Authentication & Sign-in Gateway

This is the responsive user authentication gateway providing secure customer login, new account registration, and password recovery. It includes live client-side form validation, error messaging for invalid inputs, and pre-configured demo account buttons for fast testing.
